Super Digital Signage

R E L E A S E N O T E S

Release notes

This document contains the release notes for RED-V Server ver. 19.04.A.001.

NEW FEATURES AND FUNCTIONALITIES

HTML5 Web App

Added support for upload of full HTML Web Application to the CMS as a zip file. This is currently supported by RED-V Android media players. The zip file can contain HTML pages, JavaScript files, CSS and images. The Web application can then be added to the playlists of HTML areas.

Privacy Policy

The Privacy Policy is now always available as a link on the bottom of any page of the Cloud CMS.

Timetable layout for Room booking

Added a new layout for the Room Booking feature, integrated with Microsoft Exchange Server and Office 365. The new layout shows the timetable of the current day, with events scheduled in different calendars:

08:00	08:00 - 10:00 Title of Event. Event description, topics and guests. Lorem ipsum dolor sit amet.....
09:00	
10:00	
11:00	
12:00	12:30 - 14:30 Meeting, Event description, topics and guests. Lorem ipsum dolor sit amet.....
13:00	
14:00	
15:00	
16:00	16:00 - 18:00 Title Of Event, Event description, topics and guests. Lorem ipsum dolor sit amet.....
17:00	

IFTTT

Added experimental [IFTTT](#) support that adds the possibility of changing current program playout based on some external IFTTT trigger event.

Edit Layout from Edit Program Page

It's now possible to edit the layout of a program directly from the Edit Program page. The changes made to the layout do not affect the original template on which the program was created.

Support Office 365 SharePoint

Added support on Android media players, to open SharePoint protected pages, on Office 365.

Time slots on validity period

Added time slots to validity period for resources added to a playlist. It's now possible to specify that an image, or video, has to be displayed on the screen only during a time slot; for example from 08:00 to 12:00. So even if the program is scheduled for the whole day, those resources will be displayed only during the provided time slot.

Support SMBv2 and SMBv3

On Android media players, added support for Windows SMB (i.e. Samba) protocol version 2 and version 3. SMB protocol is used to automatically download contents from a Windows shared folder.

Video Wall Sync on Samsung Monitors

Added support for Video Wall synchronized playout on Samsung monitors with Tizen and SSSP. This feature applies to RED-V Client for Samsung professional monitors with embedded SoC.
