# Release notes

## Versions 23.10.D - 24.10.E

**Date:** 7 November 2024

This document contains the release notes for RED-V Server versions 23.10.D and 24.10.E.

## Quick Summary (What's new)

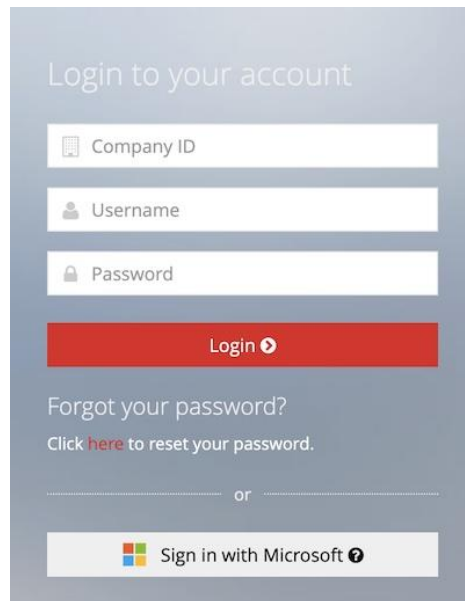

- **Microsoft Entra ID (SSO) Support:** Log in seamlessly and securely using corporate Microsoft credentials.
- **Batch Validity Scheduling for Playlists:** Define start and end times for multiple playlist items simultaneously.

## NEW FEATURES

### Microsoft Entra ID Authentication (Single Sign-On)

Enterprise-grade identity protection is now available on RED-V. We've added native support for **Microsoft Entra ID** (formerly Azure Active Directory), allowing team members to sign in securely using their existing corporate Microsoft accounts.

- **One-Click Access:** Authenticate instantly using the new "Sign in with Microsoft" button on the login page.
- **Enterprise Security:** Leverage your organization's centralized identity protection, access policies, and Multi-Factor Authentication (MFA).
- **Simplified Management:** Streamline user provisioning and eliminate the need to maintain separate credentials across systems.

## ✨ ENHANCEMENTS & IMPROVEMENTS

### Bulk Validity Period for Playlist Items

Scheduling time-sensitive campaigns is now significantly faster. You can set the **validity period for multiple playlist resources at once**, directly within the Edit Program page.

- **How it works:** A new button in the header of the playlist table opens a dedicated scheduling dialog. Simply select your items, define the target start and end dates/times, and apply them in a single step.
- **Why you'll love it:** Eliminates repetitive, item-by-item configuration when managing seasonal promotions, time-based rotations, or large content updates.
