Release notes

Version 25.04.B

Date: 4 May 2025

This document contains the release notes for RED-V Server version 25.04.B.

Quick Summary (What's new)

Priority Programs (Content Overrides): Instantly broadcast urgent alerts, announcements, or time-sensitive content across targeted screens without modifying regular schedules.

NEW FEATURE

Priority Programs (Content Overrides)

Take immediate control of your screens when critical communication is required. **Priority Programs** allows operators to temporarily override regular scheduling across targeted monitors for emergencies, time-sensitive campaigns, or special event announcements—with zero risk to your existing playlists.

- **Targeted Screen Selection:** Deploy content overrides fleet-wide, to predefined monitor groups, or to a custom manual selection of devices.
- **Automated or Manual Timing:** Schedule overrides with exact start and end dates/times, or activate/deactivate them manually on demand with a single click.
- **Automatic Schedule Reversion:** Once the priority period ends, displays automatically revert to their standard programmed playlist, eliminating the need to manually rebuild or restore schedules.
- **Status Visibility & Traceability:** Keep track of active takeovers with clear visual indicators in the CMS UI for all overridden monitors, backed by full audit logging for compliance and traceability.
- **Fast Navigation:** Enable the “Show in home page” shortcut for rapid, one-click access during critical moments, or configure settings anytime under Programs → Priority Programs (or Channels → Priority Programs).
