

RED-V
Super Digital Signage

R E L E A S E N O T E S

Release notes

Version 26.10.A.003

Date: 20 October 2026

This document contains the release notes for RED-V Server version 26.10.A.003.

Quick Summary (What's new)

- **Multi-Room Booking Template:** Display a timeline of scheduled events for multiple meeting rooms on a single screen.
- **Monthly Connectivity Matrix:** Track and export day-by-day network connectivity stats for your entire device fleet.

NEW FEATURES

Multi-Room Timeline Template (Room Booking)

We have expanded our Room Booking module with a brand-new template designed to display the schedules of multiple meeting rooms simultaneously.

- **Timeline Layout:** Built for maximum clarity, the template lists your physical rooms vertically, while the horizontal axis displays a timeline of the day's scheduled events.
- **Smart Color Coding:** To make the schedule easy to read at a glance, each room is automatically assigned a distinct, visually appealing color.
- **Why it matters:** It is the perfect digital signage solution for reception areas, main lobbies, or shared office spaces where visitors and employees need a centralized, bird's-eye view of all available meeting spaces in the building.

Monthly Device Connectivity Matrix & Excel Export

Monitoring the network stability of large fleets is now easier than ever. On the device statistics page, you can now access a comprehensive, month-by-month view of your entire account's daily connectivity.

- **Detailed Fleet Grid:** The new table provides all essential device info at a glance, including: Device Name (with a direct link to the device page), Public IP, Local IP, Registration Date (GMT), and Tags.
- **Day-by-Day Tracking:** Next to the device info, you'll find a dedicated column for every day of the selected month. The grid uses a simple visual system to show status: an 'x' means connected, an empty cell means offline, and a '-' indicates no data recorded. To improve readability, weekends are shaded grey.
- **Excel Export:** Need to share uptime reports with your IT department or clients? You can download the entire monthly connectivity matrix as an Excel file with a single click.
